WHERE MOVIE NIGHTS BEGIN

PRESENTED BY

A MOVIE NIGHT PLANNER FOR A GROUP OF FRIENDS

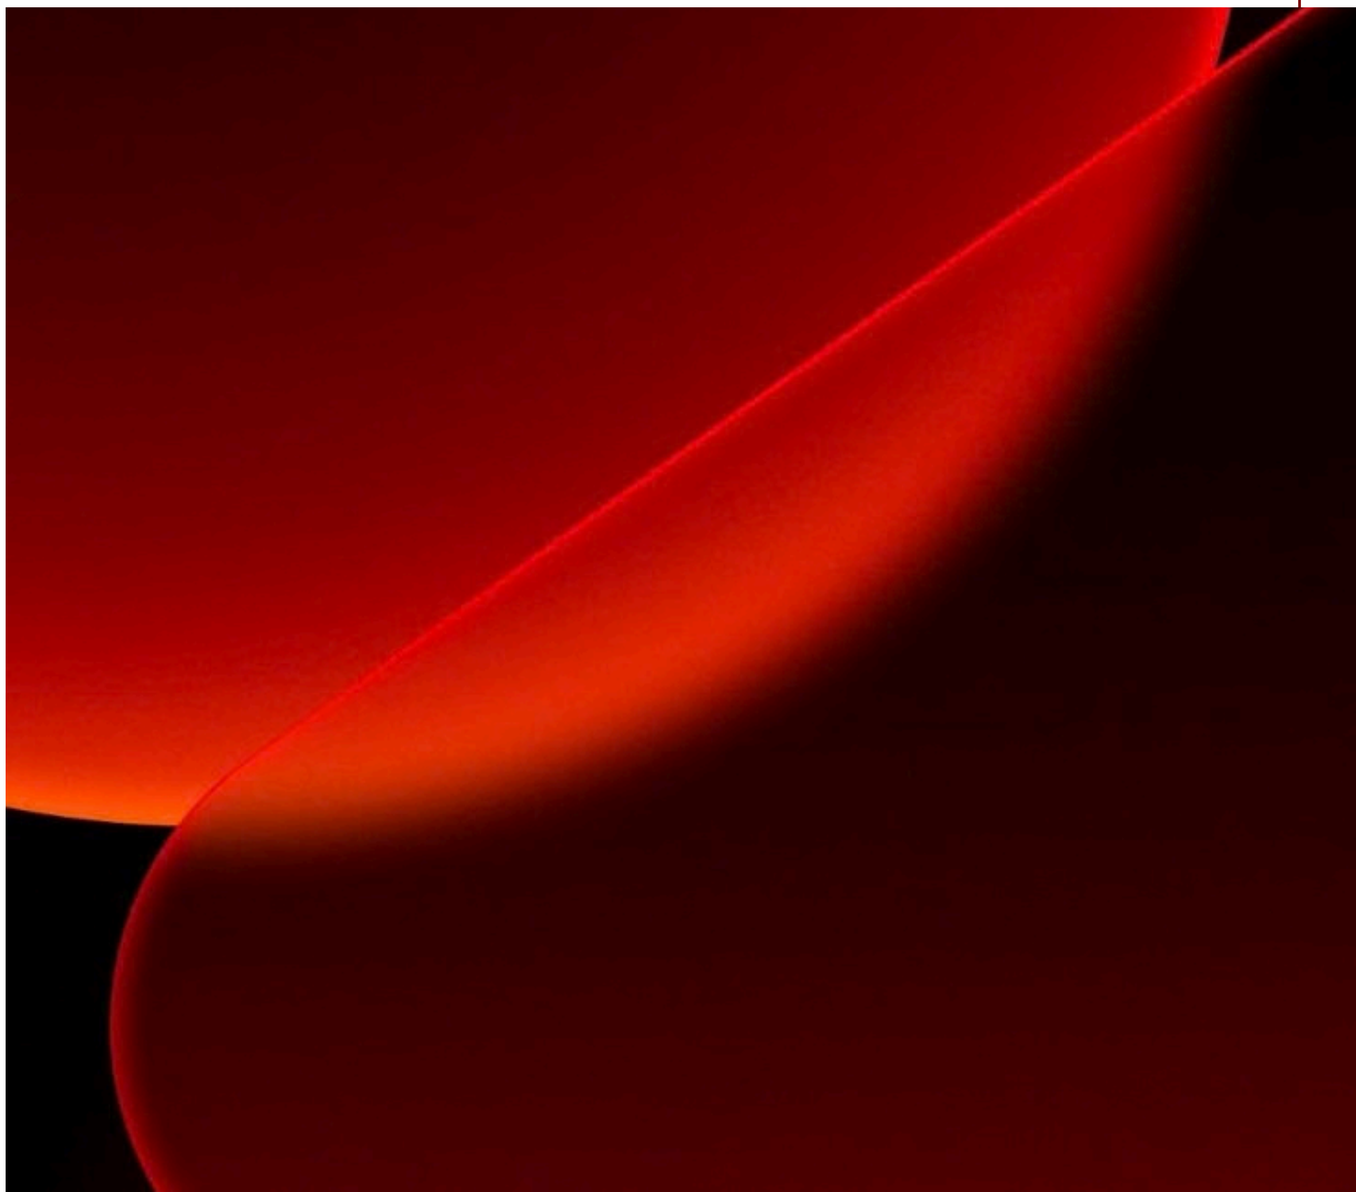

Abstract

Planning a movie night with friends usually ends in a messy group chat and a 40-minute argument over what to watch.

Cinevote turns that chaos into a quick, fun flow: create a movie night, pick the vibe, swipe on movies, and get a match everyone agrees on.

Designed as a mobile app with a cinematic dark theme, it focuses on speed, clarity and a playful voting experience.

Existing Solutions

01

WHATSAPP POLLS

Quick to create, but text-based and buried in group chats. No dedicated movie discovery or group matching.

02

LETTERBOXD

Great for ratings, reviews, logs & watchlists, but mainly focused on individual movie discovery, not group decision-making.

03

TELEPARTY

Great for watching movies together remotely, but the movie is generally already selected. It focuses on viewing, not choosing.

THE GAP

Existing platforms solve parts of the movie-night experience — but none combine movie discovery + individual preferences + group matching + final selection in one flow.

Proposed System

01 CREATE & JOIN GROUPS

Create a movie session and easily invite friends to join the group.

02 PERSONALIZED MOVIE DISCOVERY

Select preferred genres and explore movies through an interactive swipe experience.

03 GROUP MATCHING

Compare everyone's choices and identify movies that receive positive responses from the group.

04 CHOOSE & PLAN

Select a movie from the shared shortlist and finalize the movie night with a date and time.

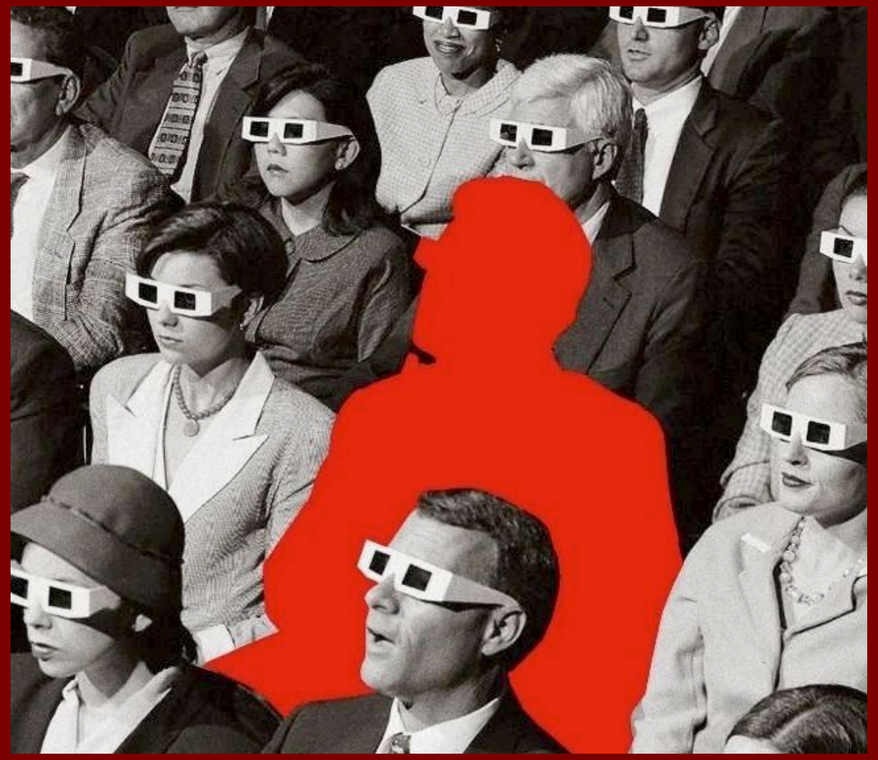

Advantages of the Application

01 **FASTER DECISION-MAKING**
Reduces the time friends spend discussing and deciding what to watch.

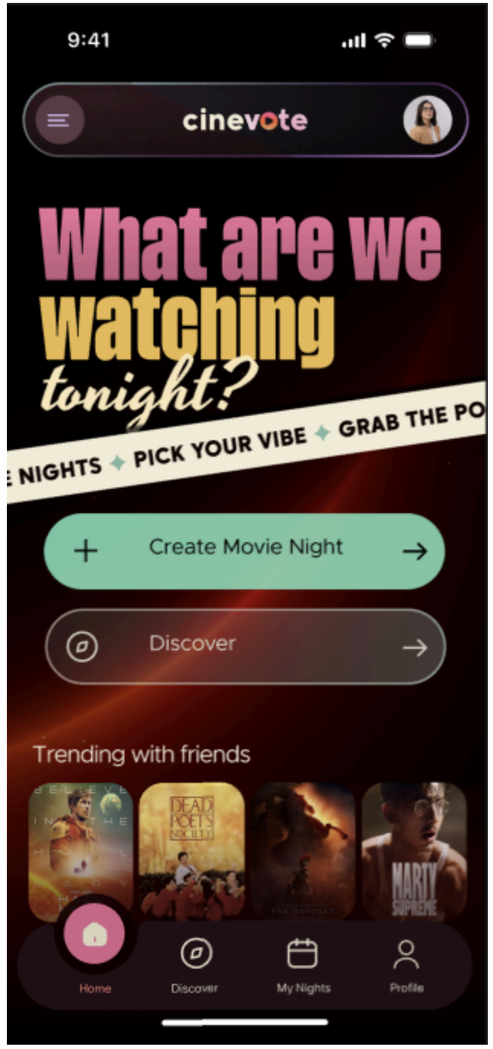

02 **GROUP-BASED RECOMMENDATIONS**
Finds common movie preferences instead of recommending movies to users individually.

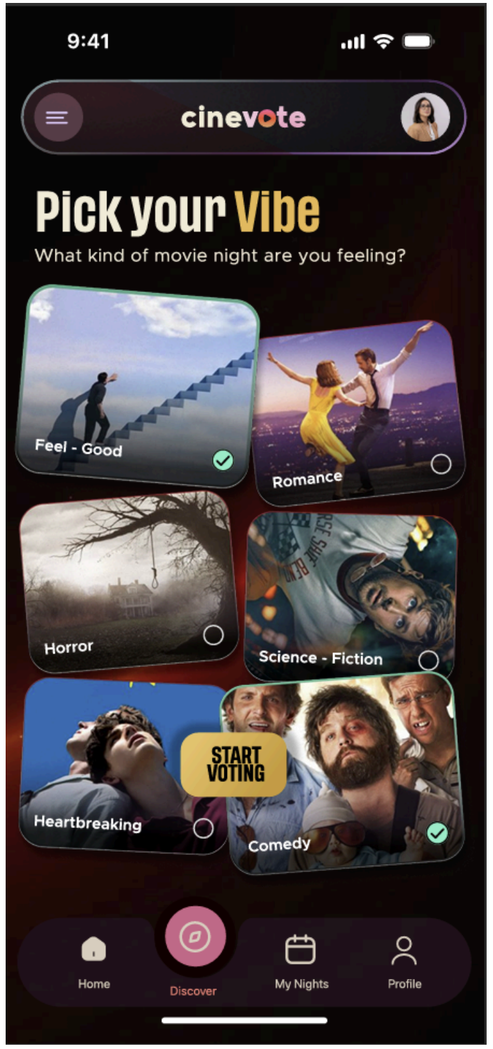

03 **INTERACTIVE EXPERIENCE**
The swipe-based interface makes movie selection quick, simple, and engaging.

04 **EQUAL PARTICIPATION**
Every friend gets the opportunity to express their preferences before the final movie is chosen.
